Maintaining PCI DSS compliance

In a world which is now driven by technology and e-commerce, achieving compliance with PCI DSS has never been more important. But this is no small undertaking.

The challenge faced by most organisations is understanding what the scope of their compliance needs to be, and how to approach this technical standard to ensure they are continually meeting its mandatory controls.

Fines issued by the ICO for insecurely stored financial data between 2015 and 2018 could have amounted to a total of over £800 million under GDPR.

PCI DSS compliance requires ongoing management. It is not a tick-box exercise – and neither is our approach to it.

Firstly, we help you understand your unique requirements, and the controls you already have in place. We believe you can't protect what you don't understand. From there, we work to design a bespoke compliance solution.

We have decades of experience working closely with our customers to ensure that they meet their desired level of compliance – and remain there.

A comprehensive approach to security

- ✓ Complete review of risk management and security processes

- ✓ Bespoke proposal to meet your unique requirements

- ✓ Policy development and staff awareness support and training

- ✓ Full implementation, management and continuous auditing

Embedding ISO27001 to comply with PCI DSS

Implementing a company-wide security policy is a key part of PCI DSS compliance.

The security standard ISO27001 provides a useful framework on which to begin building a robust security policy that encompasses people, premises and processes.

We have decades of experience in helping organisations embed ISO27001 to demonstrate that security initiatives are supported by senior management and ensure every staff member understands their role with regards to data protection and information security, helping them comply with PCI DSS.

Our comprehensive ISO27001 and PCI DSS consultancy covers the following areas:

- Leadership and accountability
- Design and implementation of policies and procedures
- Training and awareness
- Segregation of duties
- Access controls
- Protection of data
- Logging and monitoring of activities across the infrastructure
- Physical security
- Operational management of security
- Incident management and business continuity

Why Agenci?

We do things a little differently. We want to build a relationship with you that is mutually beneficial and fulfilling for us both. We will do our utmost to develop policies, procedures and practices that add real value. And we'll also commit to making the experience fun too! (quite a large ask we know!)

We are people, who understand the technical so that you don't have to. We'll take this burden from you, by understanding your needs, your concerns, your issues and then develop strategies and controls that address each of them.
